Foreword	xiii
Preface	xv
Preface of the First Edition	xvii

Part I Fundamentals

1. Introduction

1.1 Objective	3
1.2 Importance of Geophysical Fluid Dynamics	4
1.3 Distinguishing Attributes of Geophysical Flows	6
1.4 Scales of Motions	8
1.5 Importance of Rotation	10
1.6 Importance of Stratification	12
1.7 Distinction between the Atmosphere and Oceans	14
1.8 Data Acquisition	17
1.9 The Emergence of Numerical Simulations	19
1.10 Scales Analysis and Finite Differences	23
1.11 Higher-Order Methods	28
1.12 Aliasing	33
Analytical Problems	35
Numerical Exercises	35

2. The Coriolis Force

2.1 Rotating Framework of Reference	41
2.2 Unimportance of the Centrifugal Force	44
2.3 Free Motion on a Rotating Plane	47
2.4 Analogy and Physical Interpretation	50
2.5 Acceleration on a Three-Dimensional Rotating Planet	52
2.6 Numerical Approach to Oscillatory Motions	55
2.7 Numerical Convergence and Stability	59
2.8 Predictor-Corrector Methods	63
2.9 Higher-Order Schemes	65
Analytical Problems	69
Numerical Exercises	72

3. Equations of Fluid Motion	
3.1 Mass Budget	77
3.2 Momentum Budget	78
3.3 Equation of State	79
3.4 Energy Budget	80
3.5 Salt and Moisture Budgets	82
3.6 Summary of Governing Equations	83
3.7 Boussinesq Approximation	83
3.8 Flux Formulation and Conservative Form	87
3.9 Finite-Volume Discretization	88
Analytical Problems	92
Numerical Exercises	94
4. Equations Governing Geophysical Flows	
4.1 Reynolds-Averaged Equations	99
4.2 Eddy Coefficients	101
4.3 Scales of Motion	103
4.4 Recapitulation of Equations Governing Geophysical Flows	106
4.5 Important Dimensionless Numbers	107
4.6 Boundary Conditions	109
4.7 Numerical Implementation of Boundary Conditions	117
4.8 Accuracy and Errors	120
Analytical Problems	125
Numerical Exercises	126
5. Diffusive Processes	
5.1 Isotropic, Homogeneous Turbulence	131
5.2 Turbulent Diffusion	137
5.3 One-Dimensional Numerical Scheme	140
5.4 Numerical Stability Analysis	144
5.5 Other One-Dimensional Schemes	150
5.6 Multi-Dimensional Numerical Schemes	154
Analytical Problems	157
Numerical Exercises	158
6. Transport and Fate	
6.1 Combination of Advection and Diffusion	163
6.2 Relative Importance of Advection: The Peclet Number	167
6.3 Highly Advective Situations	168
6.4 Centered and Upwind Advection Schemes	169
6.5 Advection–Diffusion with Sources and Sinks	183
6.6 Multidimensional Approach	186
Analytical Problems	196
Numerical Exercises	198

Part II

Rotation Effects

7. Geostrophic Flows and Vorticity Dynamics

7.1	Homogeneous Geostrophic Flows	205
7.2	Homogeneous Geostrophic Flows over an Irregular Bottom	208
7.3	Generalization to Nongeostrophic Flows	210
7.4	Vorticity Dynamics	212
7.5	Rigid-Lid Approximation	215
7.6	Numerical Solution of the Rigid-Lid Pressure Equation	217
7.7	Numerical Solution of the Streamfunction Equation	221
7.8	Laplacian Inversion	224
	Analytical Problems	231
	Numerical Exercises	233

8. The Ekman Layer

8.1	Shear Turbulence	239
8.2	Friction and Rotation	243
8.3	The Bottom Ekman Layer	245
8.4	Generalization to Nonuniform Currents	247
8.5	The Ekman Layer over Uneven Terrain	250
8.6	The Surface Ekman Layer	251
8.7	The Ekman Layer in Real Geophysical Flows	254
8.8	Numerical Simulation of Shallow Flows	257
	Analytical Problems	265
	Numerical Exercises	267

9. Barotropic Waves

9.1	Linear Wave Dynamics	271
9.2	The Kelvin Wave	273
9.3	Inertia-Gravity Waves (Poincaré Waves)	276
9.4	Planetary Waves (Rossby Waves)	278
9.5	Topographic Waves	283
9.6	Analogy between Planetary and Topographic Waves	287
9.7	Arakawa's Grids	289
9.8	Numerical Simulation of Tides and Storm Surges	300
	Analytical Problems	309
	Numerical Exercises	312

10. Barotropic Instability

10.1	What Makes a Wave Grow Unstable?	317
10.2	Waves on a Shear Flow	318
10.3	Bounds on Wave Speeds and Growth Rates	322
10.4	A Simple Example	324

10.5	Nonlinearities	328
10.6	Filtering	331
10.7	Contour Dynamics	334
	Analytical Problems	340
	Numerical Exercises	341

Part III

Stratification Effects

11. Stratification

11.1	Introduction	347
11.2	Static Stability	348
11.3	A Note on Atmospheric Stratification	349
11.4	Convective Adjustment	354
11.5	The Importance of Stratification: The Froude Number	356
11.6	Combination of Rotation and Stratification	358
	Analytical Problems	361
	Numerical Exercises	361

12. Layered Models

12.1	From Depth to Density	365
12.2	Layered Models	369
12.3	Potential Vorticity	374
12.4	Two-Layer Models	374
12.5	Wind-Induced Seiches in Lakes	379
12.6	Energy Conservation	381
12.7	Numerical Layered Models	383
12.8	Lagrangian Approach	387
	Analytical Problems	390
	Numerical Exercises	391

13. Internal Waves

13.1	From Surface to Internal Waves	395
13.2	Internal-Wave Theory	397
13.3	Structure of an Internal Wave	399
13.4	Vertical Modes and Eigenvalue Problems	401
13.5	Lee Waves	412
13.6	Nonlinear Effects	416
	Analytical Problems	419
	Numerical Exercises	421

14. Turbulence in Stratified Fluids

14.1	Mixing of Stratified Fluids	425
14.2	Instability of a Stratified Shear Flow: The Richardson Number	429
14.3	Turbulence Closure: k -Models	435
14.4	Other Closures: $k - \epsilon$ and $k - k l_m$	449

14.5	Mixed-Layer Modeling	450
14.6	Patankar-Type Discretizations	455
14.7	Wind Mixing and Penetrative Convection	458
	Analytical Problems	466
	Numerical Exercises	467

Part IV

Combined Rotation and Stratification Effects

15. Dynamics of Stratified Rotating Flows

15.1	Thermal Wind	473
15.2	Geostrophic Adjustment	475
15.3	Energetics of Geostrophic Adjustment	480
15.4	Coastal Upwelling	482
15.5	Atmospheric Frontogenesis	490
15.6	Numerical Handling of Large Gradients	502
15.7	Nonlinear Advection Schemes	507
	Analytical Problems	512
	Numerical Exercises	516

16. Quasi-Geostrophic Dynamics

16.1	Simplifying Assumption	521
16.2	Governing Equation	522
16.3	Length and Timescale	527
16.4	Energetics	530
16.5	Planetary Waves in a Stratified Fluid	532
16.6	Some Nonlinear Effects	539
16.7	Quasi-Geostrophic Ocean Modeling	542
	Analytical Problems	546
	Numerical Exercises	547

17. Instabilities of Rotating Stratified Flows

17.1	Two Types of Instability	553
17.2	Inertial Instability	554
17.3	Baroclinic Instability—The Mechanism	561
17.4	Linear Theory of Baroclinic Instability	566
17.5	Heat Transport	574
17.6	Bulk Criteria	576
17.7	Finite-Amplitude Development	579
	Analytical Problems	584
	Numerical Exercises	585

18. Fronts, Jets and Vortices

18.1	Fronts and Jets	589
18.2	Vortices	601
18.3	Geostrophic Turbulence	611

18.4 Simulations of Geostrophic Turbulence	613
Analytical Problems	618
Numerical Exercises	621

Part V

Special Topics

19. Atmospheric General Circulation

19.1 Climate Versus Weather	627
19.2 Planetary Heat Budget	627
19.3 Direct and Indirect Convective Cells	631
19.4 Atmospheric Circulation Models	637
19.5 Brief Remarks on Weather Forecasting	642
19.6 Cloud Parameterizations	642
19.7 Spectral Methods	644
19.8 Semi-Lagrangian Methods	649
Analytical Problems	652
Numerical Exercises	653

20. Oceanic General Circulation

20.1 What Drives the Oceanic Circulation	657
20.2 Large-Scale Ocean Dynamics (Sverdrup Dynamics)	660
20.3 Western Boundary Currents	669
20.4 Thermohaline Circulation	673
20.5 Abyssal Circulation	677
20.6 Oceanic Circulation Models	681
Analytical Problems	695
Numerical Exercises	696

21. Equatorial Dynamics

21.1 Equatorial Beta Plane	701
21.2 Linear Wave Theory	703
21.3 El Niño – Southern Oscillation (ENSO)	707
21.4 ENSO Forecasting	716
Analytical Problems	720
Numerical Exercises	721

22. Data Assimilation

22.1 Need for Data Assimilation	725
22.2 Nudging	730
22.3 Optimal Interpolation	731
22.4 Kalman Filtering	739
22.5 Inverse Methods	743

22.6 Operational Models	750
Analytical Problems	754
Numerical Exercises	756

Part VI

Web site Information

Appendix A Elements of Fluid Mechanics

A.1 Budgets	763
A.2 Equations in Cylindrical Coordinates	768
A.3 Equations in Spherical Coordinates	769
A.4 Vorticity and Rotation	770
Analytical Problems	771
Numerical Exercise	772

Appendix B Wave Kinematics

B.1 Wavenumber and Wavelength	773
B.2 Frequency, Phase Speed, and Dispersion	776
B.3 Group Velocity and Energy Propagation	778
Analytical Problems	781
Numerical Exercises	781

Appendix C Recapitulation of Numerical Schemes

C.1 The Tridiagonal System Solver	783
C.2 1D Finite-Difference Schemes of Various Orders	785
C.3 Time-Stepping Algorithms	786
C.4 Partial-Derivatives Finite Differences	787
C.5 Discrete Fourier Transform and Fast Fourier Transform	787
Analytical Problems	792
Numerical Exercises	793

References	795
Index	815
