<b>Foreword</b>	<b>ix</b>
<b>Preface</b>	<b>x</b>
<b>Preface of the first edition</b>	<b>xii</b>
<b>I Fundamentals</b>	<b>1</b>
<b>1 Introduction</b>	<b>3</b>
1.1 Objective . . . . .	3
1.2 Importance of geophysical fluid dynamics . . . . .	4
1.3 Distinguishing attributes of geophysical flows . . . . .	5
1.4 Scales of motions . . . . .	7
1.5 Importance of rotation . . . . .	10
1.6 Importance of stratification . . . . .	11
1.7 Distinction between the atmosphere and oceans . . . . .	13
1.8 Data acquisition . . . . .	16
1.9 The emergence of numerical simulations . . . . .	17
1.10 Scales analysis and finite differences . . . . .	21
1.11 Higher-order methods . . . . .	26
1.12 Aliasing . . . . .	30
Analytical Problems . . . . .	32
Numerical Exercises . . . . .	32
Walsh Cottage, Woods Hole, Massachusetts . . . . .	34
UK Meteorological Office, Exeter, England . . . . .	35
<b>2 The Coriolis Force</b>	<b>37</b>
2.1 Rotating framework of reference . . . . .	37
2.2 Unimportance of the centrifugal force . . . . .	40
2.3 Free motion on a rotating plane . . . . .	42
2.4 Analogy and physical interpretation . . . . .	45
2.5 Acceleration on a three-dimensional rotating planet . . . . .	47
2.6 Numerical approach to oscillatory motions . . . . .	50
2.7 Numerical convergence and stability . . . . .	54

2.8	Predictor-corrector methods . . . . .	57
2.9	Higher-order schemes . . . . .	59
	Analytical Problems . . . . .	63
	Numerical Exercises . . . . .	65
	Biography: Pierre Simon Marquis de Laplace . . . . .	68
	Biography: Gaspard Gustave de Coriolis . . . . .	69
<b>3</b>	<b>Equations of Fluid Motion</b>	<b>71</b>
3.1	Mass budget . . . . .	71
3.2	Momentum budget . . . . .	72
3.3	Equation of state . . . . .	73
3.4	Energy budget . . . . .	74
3.5	Salt and moisture budgets . . . . .	76
3.6	Summary of governing equations . . . . .	76
3.7	Boussinesq approximation . . . . .	76
3.8	Flux formulation and conservative form . . . . .	80
3.9	Finite-volume discretization . . . . .	81
	Analytical Problems . . . . .	85
	Numerical Exercises . . . . .	87
	Biography: Joseph Valentin Boussinesq . . . . .	88
	Biography: Vilhelm Bjerknes . . . . .	89
<b>4</b>	<b>Equations Governing Geophysical Flows</b>	<b>91</b>
4.1	Reynolds-averaged equations . . . . .	91
4.2	Eddy coefficients . . . . .	93
4.3	Scales of motion . . . . .	95
4.4	Recapitulation of equations governing geophysical flows . . . . .	98
4.5	Important dimensionless numbers . . . . .	99
4.6	Boundary conditions . . . . .	101
4.7	Numerical implementation of boundary conditions . . . . .	107
4.8	Accuracy and errors . . . . .	110
	Analytical Problems . . . . .	115
	Numerical Exercises . . . . .	116
	Biography: Osborne Reynolds . . . . .	118
	Biography: Carl-Gustaf Arvid Rossby . . . . .	119
<b>5</b>	<b>Diffusive Processes</b>	<b>121</b>
5.1	Isotropic, homogeneous turbulence . . . . .	121
5.2	Turbulent diffusion . . . . .	126
5.3	One-dimensional numerical scheme . . . . .	129
5.4	Numerical stability analysis . . . . .	133
5.5	Other one-dimensional schemes . . . . .	137
5.6	Multi-dimensional numerical schemes . . . . .	142
	Analytical Problems . . . . .	144
	Numerical Exercises . . . . .	145
	Biography: Andrey Nikolaevich Kolmogorov . . . . .	147

Biography: John von Neumann . . . . .	148
<b>6 Transport and Fate</b>	<b>149</b>
6.1 Combination of advection and diffusion . . . . .	149
6.2 Relative importance of advection: The Peclet number . . . . .	152
6.3 Highly advective situations . . . . .	153
6.4 Centered and upwind advection schemes . . . . .	154
6.5 Advection-diffusion with sources and sinks . . . . .	166
6.6 Multi-dimensional approach . . . . .	169
Analytical Problems . . . . .	177
Numerical Exercises . . . . .	180
Biography: Richard Courant . . . . .	183
Biography: Peter Lax . . . . .	184
<b>II Rotation Effects</b>	<b>185</b>
<b>7 Geostrophic Flows and Vorticity Dynamics</b>	<b>187</b>
7.1 Homogeneous geostrophic flows . . . . .	187
7.2 Homogeneous geostrophic flows over an irregular bottom . . . . .	189
7.3 Non-geostrophic flows . . . . .	192
7.4 Vorticity dynamics . . . . .	194
7.5 Rigid-lid approximation . . . . .	197
7.6 Numerical solution of the rigid-lid pressure equation . . . . .	198
7.7 Numerical solution of the streamfunction equation . . . . .	202
7.8 Laplacian inversion . . . . .	204
Analytical Problems . . . . .	211
Numerical Exercises . . . . .	213
Biography: Geoffrey Ingram Taylor . . . . .	217
Biography: James Cyrus McWilliams . . . . .	218
<b>8 Ekman layer</b>	<b>219</b>
8.1 Shear turbulence . . . . .	219
8.2 Friction and rotation . . . . .	223
8.3 The bottom Ekman layer . . . . .	224
8.4 Generalization to non-uniform currents . . . . .	227
8.5 The Ekman layer over uneven terrain . . . . .	229
8.6 The surface Ekman layer . . . . .	230
8.7 The Ekman layer in real geophysical flows . . . . .	233
8.8 Numerical simulation of shallow flows . . . . .	236
Analytical Problems . . . . .	243
Numerical Exercises . . . . .	245
Biography: Vagn Walfrid Ekman . . . . .	247
Biography: Ludwig Prandtl . . . . .	248

<b>9 Barotropic Waves</b>	<b>249</b>
9.1 Linear wave dynamics . . . . .	249
9.2 The Kelvin wave . . . . .	251
9.3 Inertia-gravity waves (Poincaré waves) . . . . .	254
9.4 Planetary waves (Rossby waves) . . . . .	256
9.5 Topographic waves . . . . .	259
9.6 Analogy between planetary and topographic waves . . . . .	263
9.7 Arakawa's grids . . . . .	265
9.8 Numerical simulation of tides and storm surges . . . . .	276
Analytical Problems . . . . .	284
Numerical Exercises . . . . .	286
Biography: William Thomson, Lord Kelvin . . . . .	288
Biography: Akio Arakawa . . . . .	289
<b>10 Barotropic Instability</b>	<b>291</b>
10.1 Mechanism . . . . .	291
10.2 Waves on a shear flow . . . . .	292
10.3 Bounds on wave speeds and growth rates . . . . .	295
10.4 A simple example . . . . .	298
10.5 Nonlinearities . . . . .	302
10.6 Filtering . . . . .	304
10.7 Contour dynamics . . . . .	306
Analytical Problems . . . . .	312
Numerical Exercises . . . . .	313
Biography: Louis Norberg Howard . . . . .	315
Biography: Norman J. Zabusky . . . . .	316
<b>III Stratification Effects</b>	<b>317</b>
<b>11 Stratification</b>	<b>319</b>
11.1 Introduction . . . . .	319
11.2 Static stability . . . . .	320
11.3 A note on atmospheric stratification . . . . .	321
11.4 Convective adjustment . . . . .	326
11.5 The importance of stratification: The Froude number . . . . .	327
11.6 Combination of rotation and stratification . . . . .	330
Analytical Problems . . . . .	332
Numerical Exercises . . . . .	333
Biography: David Brunt . . . . .	334
Biography: Vilho Väisälä . . . . .	335
<b>12 Layered Models</b>	<b>337</b>
12.1 From depth to density . . . . .	337
12.2 Layered models . . . . .	340
12.3 Potential vorticity . . . . .	346
12.4 Two-layer models . . . . .	347

12.5	Wind-induced seiches in lakes . . . . .	351
12.6	Energy conservation . . . . .	352
12.7	Numerical layered models . . . . .	354
12.8	Lagrangian approach . . . . .	358
	Analytical Problems . . . . .	361
	Numerical Exercises . . . . .	362
	Biography: Raymond Braislin Montgomery . . . . .	363
	Biography: James Joseph O'Brien . . . . .	364
<b>13</b>	<b>Internal Waves</b>	<b>365</b>
13.1	From surface to internal waves . . . . .	365
13.2	Internal-wave theory . . . . .	366
13.3	Structure of an internal wave . . . . .	369
13.4	Vertical modes and eigenvalue problems . . . . .	371
13.5	Lee waves . . . . .	381
13.6	Nonlinear effects . . . . .	385
	Analytical Problems . . . . .	388
	Numerical Exercises . . . . .	389
	Biography: Walter Heinrich Munk . . . . .	391
	Biography: Adrian Edmund Gill . . . . .	392
<b>14</b>	<b>Turbulence in Stratified Fluids</b>	<b>393</b>
14.1	Mixing of stratified fluids . . . . .	393
14.2	Instability of a stratified shear flow: The Richardson number . . . . .	397
14.3	Turbulence closure: k-models . . . . .	403
14.4	Other closures: $k - \epsilon$ and $k - kl_m$ . . . . .	414
14.5	Mixed-layer modeling . . . . .	415
14.6	Patankar-type discretizations . . . . .	419
14.7	Wind mixing and penetrative convection . . . . .	422
	Analytical Problems . . . . .	428
	Numerical Exercises . . . . .	429
	Biography: Lewis Fry Richardson . . . . .	432
	Biography: George Mellor . . . . .	433
<b>IV</b>	<b>Combined Rotation and Stratification Effects</b>	<b>435</b>
<b>15</b>	<b>Dynamics of Stratified Rotating Flows</b>	<b>437</b>
15.1	Thermal wind . . . . .	437
15.2	Geostrophic adjustment . . . . .	439
15.3	Energetics of geostrophic adjustment . . . . .	443
15.4	Coastal upwelling . . . . .	445
15.5	Atmospheric frontogenesis . . . . .	454
15.6	Numerical handling of large gradients . . . . .	464
15.7	Nonlinear advection schemes . . . . .	468
	Analytical Problems . . . . .	474
	Numerical Exercises . . . . .	476

Biography: George Veronis . . . . .	479
Biography: Kozo Yoshida . . . . .	480
<b>16 Quasi-Geostrophic Dynamics</b>	<b>481</b>
16.1 Simplifying assumption . . . . .	481
16.2 Governing equation . . . . .	482
16.3 Length and time scales . . . . .	487
16.4 Energetics . . . . .	489
16.5 Planetary waves in a stratified fluid . . . . .	491
16.6 Some nonlinear effects . . . . .	497
16.7 Quasi-geostrophic ocean modeling . . . . .	500
Analytical Problems . . . . .	503
Numerical Exercises . . . . .	504
Biography: Jule Gregory Charney . . . . .	507
Biography: Allan Richard Robinson . . . . .	508
<b>17 Instabilities of Rotating Stratified Flows</b>	<b>509</b>
17.1 Two types of instability . . . . .	509
17.2 Inertial instability . . . . .	510
17.3 Baroclinic instability – The mechanism . . . . .	516
17.4 Linear theory of baroclinic instability . . . . .	522
17.5 Heat transport . . . . .	530
17.6 Bulk criteria . . . . .	532
17.7 Finite-amplitude development . . . . .	534
Analytical Problems . . . . .	537
Numerical Exercises . . . . .	540
Biography: Joseph Pedlosky . . . . .	541
Biography: Peter Broomell Rhines . . . . .	542
<b>18 Fronts, Jets and Vortices</b>	<b>543</b>
18.1 Front and jets . . . . .	543
18.2 Vortices . . . . .	555
18.3 Geostrophic turbulence . . . . .	563
18.4 Simulations of geostrophic turbulence . . . . .	566
Analytical Problems . . . . .	570
Numerical Exercises . . . . .	572
Biography: Melvin Ernest Stern . . . . .	574
Biography: Peter Douglas Killworth . . . . .	575
<b>V Special Topics</b>	<b>577</b>
<b>19 Atmospheric General Circulation</b>	<b>579</b>
19.1 Climate versus weather . . . . .	579
19.2 Planetary heat budget . . . . .	579
19.3 Direct and indirect convective cells . . . . .	583
19.4 Atmospheric circulation models . . . . .	588

19.5	Weather forecasting . . . . .	592
19.6	Cloud parameterizations . . . . .	592
19.7	Spectral methods . . . . .	594
19.8	Semi-Lagrangian methods . . . . .	598
	Analytical Problems . . . . .	600
	Numerical Exercises . . . . .	601
	Biography: Edward Norton Lorenz . . . . .	602
	Biography: Joseph Smagorinsky . . . . .	603
<b>20</b>	<b>Oceanic General Circulation</b>	<b>605</b>
20.1	What drives the oceanic circulation . . . . .	605
20.2	Large-scale ocean dynamics (Sverdrup dynamics) . . . . .	608
20.3	Western boundary currents . . . . .	616
20.4	Thermohaline circulation . . . . .	619
20.5	Abyssal circulation . . . . .	623
20.6	Oceanic circulation models . . . . .	626
	Analytical Problems . . . . .	639
	Numerical Exercises . . . . .	639
	Biography: Henry Melson Stommel . . . . .	641
	Biography: Kirk Bryan . . . . .	642
<b>21</b>	<b>Equatorial Dynamics</b>	<b>643</b>
21.1	Equatorial beta plane . . . . .	643
21.2	Linear wave theory . . . . .	645
21.3	El Niño – Southern Oscillation (ENSO) . . . . .	649
21.4	ENSO forecasting . . . . .	658
	Analytical Problems . . . . .	660
	Numerical Exercises . . . . .	661
	Biography: George Philander . . . . .	662
	Biography: Paola Malanotte Rizzoli . . . . .	663
<b>22</b>	<b>Data Assimilation</b>	<b>665</b>
22.1	Need for data assimilation . . . . .	665
22.2	Nudging . . . . .	669
22.3	Optimal interpolation . . . . .	670
22.4	Kalman filtering . . . . .	676
22.5	Inverse methods . . . . .	681
22.6	Operational models . . . . .	687
	Analytical Problems . . . . .	691
	Numerical Exercises . . . . .	694
	Biography: Michael Ghil . . . . .	696
	Biography: Eugenia Kalnay . . . . .	697

<b>VI Web-site information</b>	<b>699</b>
<b>Appendix A: Elements of Fluid Mechanics</b>	<b>703</b>
A.1 Budgets . . . . .	703
A.2 Spherical coordinates . . . . .	708
A.3 Cylindrical coordinates . . . . .	708
A.4 Vorticity and rotation . . . . .	709
Analytical Problems . . . . .	710
Numerical Exercises . . . . .	711
<b>Appendix B: Wave Kinematics</b>	<b>713</b>
B.1 Wavenumber and wavelength . . . . .	713
B.2 Frequency, phase speed, and dispersion . . . . .	715
B.3 Group velocity and energy propagation . . . . .	717
Analytical Problems . . . . .	720
Numerical Exercises . . . . .	721
<b>Appendix C: Recapitulation of Numerical schemes</b>	<b>723</b>
C.1 The tridiagonal system solver . . . . .	723
C.2 1D finite-difference schemes of various orders . . . . .	725
C.3 Time-stepping algorithms . . . . .	727
C.4 Partial-derivatives finite differences . . . . .	729
C.5 Discrete Fourier Transform and Fast Fourier Transform . . . . .	729
Analytical Problems . . . . .	734
Numerical Exercises . . . . .	734
<b>References</b>	<b>735</b>
